Abstract. Sharing information is the exchange of data in many various of organizations, people and technologies. It is also information shared by individuals such as sharing in social media platform and in any platform. Sharing information and sharing knowledge are closely related words that are frequently interchangeably used. The exchange of knowledge can be interpreted as a collection of activities that offer information to others, either proactively or on request. After that, Social media refers to websites and software that is designed to allow individuals share content easily, accurately, and in real-time. While many individuals use mobile apps to access social media, this networking method began with computers, and social media can refer to any internet communication tool that enables users to exchange information widely and communicate with the public.
Keywords : Sharing information, Social media, sharing

Introduction

Sharing information and sharing knowledge are loosely connected words that are frequently used interchangeably**.** It is also when someone sharing an information whether in social media or any platform. But it have to be a good information to share. Nowadays, students are exposed with gadget and we can see in social media it is almost population is from teenagers and students until they became addicted to social media. Sharing information is also an activities that people would do to sharing knowledge or information in any platform. But we as observer need to find a good information in a trust platform or website because there so many fake information or news in digital era nowadays. Meanwhile, as we all know that sharing information has advantages and disadvantages same as pros and cons as well. So as a users we need to choose whether it is good or bad information.

A social media is an online medium used for individuals to create social networks or social interactions with other individuals that share personal or professional values,

hobbies, backgrounds or real-life links that are identical. After that, Social media is a revolutionary phenomenon with a very clever potential with extra space for growth. Many organisations are making use of this platform to develop their operations through the promotion of social media. We may advertise or connect in a more meaningful way through the use of social networks. Meanwhile, Sites for social networking will help young people become more socially capable. Social networking is a means of data sharing that is web-based. Platforms for social media allow people to hold conversations, share data and generate web content. In addition, Social media is a term used to describe the connection between groups or individuals in which thoughts, photos, videos and many more are created, posted, and often exchanged over the internet and in virtual communities.

As we all know social media give positive and negative impact to students. It is because when they exposed to social media it can give an addicted to students so they cannot pay attention on academic performance. After that, social media actually easier for people or students stay connect but it can be causes or can get impact when they misuse the information.

The Disadvantages Of Sharing Information On Social Media Among Students.

The impact of Sharing information through Social Media to Student's academic perfomances

According to the Author's (Cole, 2009; Väljataga & Fiedler, 2009). Which is author stated that Social networking may cause teachers to forget to use the necessary materials or resources to encourage student use and learning inadvertently. Based on what author said it is give impact to all students and educators when through social media information sharing is limited. Because its difficult to get all students connect each other through online. After that, author's said that fail to provide the resources to support students usage so it will effect their academic performances.

Morever, Social networking can also have a detrimental influence on student GPA, as well as the amount of time students have spent preparing for class. (Annetta et al., 2009). It is because when student spend so much time to find the resources its can give impact for them. Meanwhile, when sharing information to their friends it might be wrong information or something. So it give negative impact through social media for sharing information. After that, according to author Patera et.al,(2008) its stated that The result is that so much attention is generated by social media and will therefore deter students from finishing their coursework. Another explanation for this may be that it may be difficult for learners who invest more time on social media to reconcile their networking behaviours with their academic training.

Risk of social network engagement (Cyberbullying and sharing information)

Cyberbullying is bullying. With the use of digital technologies, cyberbullying. It will take place on social media, channels for texting, platforms for games and smart

phones. It is repeated behaviour that aims to frighten, anger or shame those who are targeted. According to the authors Bauman S, et.al. (2014) In the present study, The role of social networks and the dangerous behaviour of exchanging passwords with peers have been studied as predictors of youth engagement in cyberbullying. If we post the data on social media, it is reported that it may be dangerous. Meanwhile, Ybarra ML, et.al. (2006) said that Cybervictimization has been related to psychological issues, social anxiety, decreased school academic performances, and have problems at home. Cyberbullying individuals fail more academically than their peers and have reported being less prevalent than their peers. After that, As Authors stated by Juvonen J (2008) Previous analysis has associated time spent online with interest in cyberbullying. With hours of use on the previous day, frequent Internet users had more experience with cyber bullying. In addition, according to Vandebosch H, (2009), Since there are more outlets for these concerns, young people who spend more time in cyber spaces could be at higher risk of witnessing cyberbullying.

Negative impact of Social media websites and health in sharing information

Every human have fear when its relate to health issues. His or her life will be changed if someone has health complications. By researcher named Dr Sam Thomas, (2011) His paper revealed Excessive time on social networking sites can contribute to addiction to the internet. Students around the world devote a lot of time on social networking sites, which has huge repercussions (Kandell, 1998; Griffiths, 2000). In addition, Revealing that students' over-involvement or fascination with social networking may have detrimental consequences on academic success (Kirschner & Karpinski, 2010). Meanwhile, by authors Fenichel, (2009 The researchers revealed any addictive signs have been revealed by students, including Salience (both cognitive and behavioural), Lack of Awareness, Withdrawal and Relapse, and Reinstatement.

CONCLUSION

In conclusion, Sharing information on social media among students give negative impact. Result on the research showed that there is effect of sharing information on social media among students. After that, The result of the research is perfectly consistent with the other findings in the literature analysis of academic achievement listed above. Meanwhile, Every day young people are found in contact with these media. Social media has distinct merits, but it also has a few faults that affect people in contrast. False data can lead to disappointment in the training framework, incorrect promotion in organisations will affect productivity, online networking can manage the general public by attacking the security of individuals, some pointless sites can affect young people who can end up clearly savage and can take a few wrong activities. Some people may give feedback that sharing information on social media among students is a good or effective tools or things to use platform. But there have to be pros and cons in any aspect. By that, students or lecturer should acknowledge first the symptom and gain knowledge of sharing information to others. Last but not least,

whether it is positive or negative impact we need to be professional in every aspect because it is for their future study.
